PROFESSIONAL SUMMARY

Full-stack developer skilled in Python, Django, and React, with hands-on experience building REST APIs using Django REST Framework and complete user interfaces with React and Redux Toolkit. Built applications end-to-end — from database modeling and authentication/authorization to frontend integration — using PostgreSQL, MongoDB, and Redis.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, SQL
- **Backend:** Django, Django REST Framework, REST API Design
- **Frontend:** React, Redux Toolkit, HTML, CSS
- **Databases:** PostgreSQL, MongoDB, Redis
- **Tools:** Git, GitHub, Postman, AWS
- **Core Concepts:** JWT Authentication & Authorization, Role-Based Access Control, OOP, Data Modeling

PROJECTS

User & Admin Management Dashboard

Django REST Framework, React, Redux Toolkit, JWT, PostgreSQL | [GitHub](#) | [Live Demo](#)

- Built a Django REST Framework backend with JWT access/refresh authentication and a custom permission class restricting user-management endpoints to admin roles.
- Implemented paginated, searchable admin APIs for user CRUD, with business rules blocking self-deletion and admin-on-admin deletion.
- Built the React frontend with Redux Toolkit for auth/admin state, protected and admin-only routes, and an Axios interceptor that silently refreshes expired access tokens.

Splitwise-Style Expense Settlement Backend

Django, PostgreSQL | [GitHub](#)

- Designed a Django backend with a dedicated service layer separating settlement logic from views, using Decimal arithmetic for precise balance calculations.
- Implemented a debt-simplification algorithm that reduces group expense shares into a minimal set of settlement transactions.
- Modeled groups, expenses, and per-user expense shares with the Django ORM, with Django Admin for internal management and unit tests covering the settlement API.

CoreFitness – E-Commerce Platform

Django, React, PostgreSQL, Redis, AWS | [Live Demo](#)

- Developed a full-featured e-commerce platform with secure authentication, OTP verification via Redis, and Razorpay test-mode payment integration.
- Built an admin dashboard with invoice generation and deployed the backend on AWS.

OLX-Style Marketplace

React, Firebase, Cloudinary | [GitHub](#)

- Built a React marketplace UI with Firebase authentication and Context API for global user and product state.
- Implemented listing creation with Cloudinary image uploads and form validation using React Hook Form and Zod schemas.

Additional Projects: [Request Forge](#) – React API testing tool; [Netflix-Style Browser](#) – React/TMDB/Firebase; [Personal Portfolio](#) – React/Vercel.

EXPERIENCE

Brotoype, Kochi — Full-Stack Developer Trainee 2025 – Present

- Completed intensive full-stack development training focused on Python, Django, Django REST Framework, React, and SQL/NoSQL databases through project-based development.
- Built multiple full-stack applications independently, working across data modeling, REST APIs, backend business logic, authentication, and frontend integration.

EDUCATION

- **Bachelor of Computer Applications (BCA)** — Indira Gandhi National Open University (IGNOU), 2025 – Present
- **Higher Secondary Education, Commerce with Computer Applications** — Kerala State Board, 2022 – 2024
